Herbicide Application

- Herbicide application allows woody vegetation to be controlled which allows native grasses and flowers to grow. PEC utilizes a seven-year cycle of ROW clearing, with initial mechanical clearing followed by one growing season and two consecutive years of foliar treatment (herbicide) to eliminate woody vegetation. Herbicide is applied in the months of June, July, and August.
- PEC's herbicide program allows a member to decline the use of herbicide application on property(s) they own provided they meet certain requirements.
 - Current signed No Herbicide Use-Request is on file.
 - Description of area not to be treated with boundaries marked.
- PEC preapproved herbicides
 - Mix #1
 - Foliar Mix added to 100 gallons of water:

| | |
|-------------|--------|
| ▪ Garlon 3A | 33.33% |
| ▪ Milestone | 2.60% |
| ▪ Aquafact | 16.67% |
| ▪ Water | 47.40% |
| ▪ Escort XP | 15 oz |
 - Mix #2
 - Wetland Mix added to 4 gallons of water:

| | |
|----------|------------|
| ▪ Accord | 7.5 ounces |
